3-n-1 GUNLOK™ California Approved: GL550 & GL650 -

PRO-LOK®

California Safety Device Law

In most cases, California now requires every firearm sold or transferred to be accompanied with a California approved safety device. Pro-Lok® did not learn about the California lock requirements until after the new law passed and the initial requirements were published. Pro-Lok® acted quickly to adjust, modify and develop products to meet the needs of these new requirements.

TESTED & APPROVED:

The GL550 & GL650 locks are California approved safety device. There are currently 7 approved trigger locks on the California Department of Justice roster of approved safety devices. 6 out of the 7 approved trigger locks are made by Pro-Lok®. Pro-Lok believes this accomplishment demonstrates their commitment to producing the finest quality locks, while at the same time using innovative, patented and patent pending ideas to meet the wants and needs of gun owners everywhere.

The CADOJ not only requires that an approved safety device be sold with each firearm, but also requires that the firearm safety device be certified for the specific firearm being sold. Our GL550 & GL650 series locks are certified for approximately 3,500 & 4,500 firearm models respectively.

Gun locks by themselves cannot prevent unauthorized user access under all circumstances, but they are an important part of safe storage. Pro-Lok locks have been tested to deter and meet or exceed all requirements under California penal code 12088.

■ Pry tested PASSED	■ Drop tested PASSED	■ Impact tested PASSED

■ Saw tested PASSED	■ Manipulation tested ... PASSED	■ Forced tested PASSED
■ Pick tested PASSED	■ Shock tested PASSED	■ Tensile tested PASSED

ACCIDENTAL DISCHARGE CABLE-

The GL550 & GL650 models include an 18" accidental discharge cable. This optional stand-alone cable can be used and threaded through the action on most firearms. The cable provides an extra layer of deterrence. The ends of the cable are easily attached to the inside face of the trigger lock. Using the accidental discharge cable is getting the best benefits of both a trigger lock and cable lock in one lock! If the cable is used, the user knows that the firearm is unloaded and cannot be accidentally discharged on most guns.

Note: The optional Accidental Discharge Cable may not be used, be long enough, fit or be appropriate for use on all firearms.

Custom Fit the Lock to Your Firearm-

Pro-Lok locks are very unique. When you consider all of the different sizes, shapes & designs of firearms available, it is difficult to make a "one-size" fits all lock. The inside face of their lock is covered with random holes. A total of 8 rubber coated steel dowel pins are provided with the lock.- The firearm is placed on the lock. The dowel pins are then placed in the holes located around your trigger guard and behind your trigger (when possible). When the dowel pins are properly placed, the trigger cannot be depressed on most guns. Additionally, the trigger guard is sandwiched on the side and the bottom. This exclusive Pro-Lok® feature adds strength and restricts the firearm from moving and/or shifting on most firearms.

STEEL, STEEL, STEEL... Not Die-Cast!

STEEL LOCKING POST for the GL550

The adjustable locking post is machined from steel as opposed to being die-cast material. Pro-Lok believes that the additional cost of machining the locking post from steel is well worth the additional quality and strength that the steel provides.

Steel Ratchet Locking Design for the GL650-

Many gun locks are made with a die-cast locking or latching system, Pro-Lok's GL650 series ratchet latching system is constructed of steel.- Pro-Lok designed this lock using a steel locking system for strength and durability purposes. Their ratchet system also allows this lock to easily adjust to various trigger guard thicknesses.

Warning: These locks will not fit all firearms. This lock may not be appropriate to be used in all homes or under all conditions. Read and follow the detailed instructions, warnings and inspection procedures included with each lock.

GL550 Unique Features:

Pro-Lok's Locks have Features & Benefits that are unavailable in any other brand.

SIMPLE TO USE KEY LOCK

The key can only be removed in the locked position. The user knows that when the key is removed, the locking cylinder is turned to the fully locked position.

ADJUSTABLE LOCKING POST

Trigger guards vary in size and thickness from model to model. The locking post can be adjusted to the thickness of most trigger guards. The locking post on this lock can be threaded up or down, adjusting the lock to the thickness of most trigger guards.

WARNING: NEVER USE THIS LOCK ON A LOADED FIREARM!!

3-n-1 GUNLOK™ California Approved: GL650 - (cont'd)

GL650 Unique Features:

This Lock Has Something Unique to Offer Most Gun Owners—

Some people want Instant Access. Some people want Additional Protection.
Some people want a Trigger Lock, and Some people want a Cable Lock.

YOU WILL GET ALL OF THESE WITH THE GL650!

3 Locks in 1 - Use 1, 2 or ALL 3 Levels!

There is no comparison! Your needs may change— so will your lock.

INSTANT ACCESS -

This lock is very unique. When the gun owner has immediate possession or control of their gun, the lock can be opened in 2 seconds without the use of a key or combination. There is a special sequence required to open this lock. Once the owner knows the special trick to open this lock, it is very easy to use. Pro-Lok has demonstrated this feature at gun shows to thousands of gun owners, media, law enforcement officials, locksmiths and gun manufacturer's. The consensus and response has been overwhelming when this feature is demonstrated. Pro-Lok has baffled some of the best experts in the country. (Special sequence is not shown here for security purposes). When the gun is not in your immediate possession or control, the key is used to "key lock" the gun lock. Using the key disables the instant access feature. When the key is used to "key lock" the lock, the special sequence then becomes an additional layer of deterrence. An unauthorized user, without the knowledge of the instant access feature, is unlikely to quickly or easily open the lock. Using the key is still very important. If you store your firearms in a safe, the dial must be spun to "lock" the safe. Using the key with this lock is comparable to the need and responsibility of spinning the safe dial or locking the deadbolt on your front door.

ADDITIONAL PROTECTION -

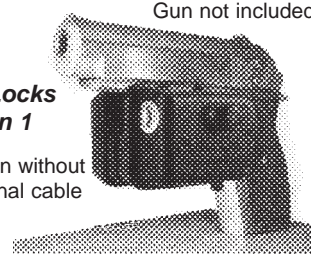

Many gun owners want extra protection than provided by a traditional trigger or cable lock. If the key is found or stolen, a typical trigger or cable lock is opened easily. If the key is found or stolen for the GL650, the unauthorized user is unable to open the lock without the knowledge (or luck) of the special sequence required to remove the lock. The special sequence provides an additional layer of deterrence in the event access to the key is obtained.

WARNING: NEVER LEAVE THE LOCK IN THE INSTANT ACCESS FEATURE WHEN THE FIREARM IS NOT IN YOUR IMMEDIATE POSSESSION OR CONTROL. NEVER INSTALL THIS LOCK ON A LOADED FIREARM!!
